

PRUDENTIAL SINGAPORE

Business KPI Report | Executive Visual Brief

Prepared from governed KPI views | 14 September 2026 | Confidential business report

From portfolio scale to profitable, trusted growth

The portfolio is substantial, but profitability and retention require active management. Low-margin products represent 73.48% of APE, while lapse is 9.48%. The strongest near-term opportunity is to protect persistency and improve the economics of high-volume segments without weakening customer trust.

PORTFOLIO APE SGD 856.30M Annualised premium equivalent	NBP MARGIN 8.97% New business profit / APE	LAPSE RATE 9.48% Policy retention pressure
NBP SGD 76.77M New business profit	CUSTOMERS 28,134 Distinct customers	CLAIM TURNAROUND 19.4 days Average processing time

Management focus

Use **quality of earnings** as the steering lens: profitability by product/channel, retention indicators, claims experience, and control signals should be reviewed together.

Executive Scorecard

A management-ready view of portfolio scale, profitability, retention and claims operations.

POLICIES 47,500 Clean policy records	CLAIMS 28,366 Accepted claim records	AVG CLAIM SGD 9K Average claim amount
LOW-MARGIN MIX 73.48% APE from low-margin products	13-MONTH FAILURE 5.59% Persistency gap	HIGH-RISK PREMIUM SGD 15.42M Agent attrition exposure

Control & trust indicators

Metric	Value	Interpretation
Complaint rate	5.85%	Customer trust indicator
Dispute rate	1.57%	Claims dispute indicator
Control breaches	4.50%	Approval / segregation signals

Interpretation: the portfolio generates SGD 76.77M of NBP from SGD 856.30M of APE. The high low-margin mix and retention indicators mean growth should be evaluated on quality of earnings, not volume alone.

Profitability & Retention

Where management attention should be concentrated.

Blended NBP margin by product category

APE mix requiring attention

Management interpretation

1. Review pricing, benefit design and channel economics for the 73.48% low-margin APE mix.
2. Prioritise retention interventions before lapse becomes embedded in the book.
3. Use margin by product and channel as the commercial steering view, not policy count alone.

Decision requested

Agree a product-level profitability review and a retention action plan for the highest-value lapse segments. Track both margin and 13-month persistency in the same leadership dashboard.

Claims, Health Gap & Customer Trust

Operational experience is a commercial outcome.

Loss ratio rises with longer care delay

Trust indicator	Value	Management meaning
Claim turnaround	19.4 days	Operational service experience
Dispute rate	1.57%	Dispute friction
Complaint rate	5.85%	Customer trust pressure

What the data suggests

The loss ratio increases from **26.0%** for policies with no care delay to **35.6%** for policies with delays exceeding six months. This is a material signal for care navigation, early support and claims prevention programmes.

Claims operations should be managed as part of customer retention, not as a separate back-office measure.

Data Quality & 30-Day Action Plan

Transparent decisions require transparent controls.

DATE QUALITY 263 Policy start dates affected	QUOTE DATE 1 Affected record	CLAIM DATE 3 Affected records
---	---	--

Field	Affected records	Problematic range
policy_start_date	263	2075-06-15 to 2099-12-31
quote_date	1	2026-12-03 to 2026-12-03
claim_date	3	2026-11-05 to 2026-12-01

Recommended 30-day action plan

1. Correct or quarantine implausible policy, quote and claim dates before publishing monthly trends.
2. Launch a profitability review for low-margin products and affected distribution channels.
3. Build a retention programme using lapse, persistency and rider repricing signals.
4. Reduce claim friction by monitoring turnaround, complaints, disputes and control breaches together.
5. Establish a monthly KPI governance meeting with owners, thresholds and documented actions.

Recommended client message: the analytics layer is ready for management decisions, with one focused data-quality remediation required before time-based trend reporting.
